

THANK YOU VERY MUCH

for visiting our booth at
METALEX Thailand 2018 !

METALEX 2018 has successfully completed

METALEX 2018 at Bitec in Bangkok has come to close. Hundreds of customers from around the world came to our booth, and all of them showed great interests in our labels!! We found that most of the visitors were highly interested in temperature monitoring for process control and research.

Among the visitors are various engineers, managers, directors, researchers, professors, consultants, technical advisors. We shared the problems about temperature control and talked about how to cope with them using our temperature labels. It was a great experience for us and we were very happy that we had this great opportunity to see you all. Thank you very much!

The advantage of chemical irreversible label

“Irreversible never lies”. This is the phrase we sometimes use when we talk about the merit of using temperature labels. If the label has reached to a specific temperature, the indicator changes in a blink and it will never go back to the original. This means that you won't miss the fact that the temperature has crossed a threshold temperature in the past.

Solutions for quality control and temperature monitoring

Temperature is an important factor in all of our lives, supporting safety and quality in every field and category of business. Temperature monitoring is indispensable in fields such as process control, quality assurance, maintenance of machine/machinery, distribution and infrastructure. Temperature Label requires no power supply no specific technology. Just by applying the Temperature Label, you can quickly note temperature changes just by looking. NiGK provides quality control and temperature monitoring solutions for every profession.

Sample: For your solutions!

NiGK can provide various type of sample for you on request. Please feel free to contact us anytime. You can get anything what you want.
